

WHAT THEY SAY

“ It helps us to achieve our main goal - to deliver the best quality lenses to our customers in the shortest possible time.

The NeoMapper is a fully automated in-line inspection unit that reliably and accurately measures all key optical and geometrical lens properties and compares them to the target properties.

It provides fast, simplified go/no-go feedback along with a **clear error map**, significantly improving the efficiency of the inspection process.

The machine we are testing has already helped us to **increase internal yield and reduce production costs** by optimising preventive maintenance and improving the surfacing process.”

Tansel AKIN
HOYA

Precision technology, improving vision while caring for the planet.

Options available:

- Cosmetic inspection
- Inking module
